5. Structure, size and marks.

Please refer to the attached diagram.

6. Appearance

There should be no craft, scratch, breakage, dust, color changed, leakage and deformed.

7. WARRANTY

Guarantee time for one year due to the processing and raw material defectiveness.

Suggestion: The products before delivery would be charged 20-80% capacity according to the transportation distance and packing condition. While checking the capacity, please discharge the battery at 0.2C to 1.0V; then charge and discharge the battery at by standard current. If the storage time over 2 months or above, please discharge the battery at the current 0.2C to 1.0V, then charge the battery at 0.1C for 15 hours, after that place for 20mins, discharge the battery at 0.2C to 1.0V. After this activation, check the capacity by the standard current charge and discharge the battery

The first time use suggested to take standard charge method to charge the battery to prevent from damage to battery.

8. CAUTION

- A. Please do not throw into fire or try to open it.
- B. Please do not mix use with other type of batteries or old one.
- C. Please do not discharge the battery at the current exceeds the stipulated one on specification.
- D. Please do not short circuit the battery prevent from permanent damage.
- E. Please do not jointing the batteries.
- F. Please do not reverse load the batteries.
- G. If use the battery at the utmost condition, it could be shorten the battery recycling life, such as utmost temperature, recycling and utmost charge and discharge it.
- H. The battery should be place in cool and dry environment with the charged condition. And should be discharged before mass delivery.
- I. The battery should be stopped using while abnormal happened during working process, please send the battery to the distributor for handling.
- J. Due to the controlled by electrochemistry system, for long time storage situation, suggested to charge the battery to 80%~100% of its capacity.
- K. In order to maintain the battery performance, after storage over 6months, suggest to charge and discharge the battery(Discharge the battery at current 0.2C to 1.2.0V before charge the battery). Then can use or stock it.
